

# Enbridge has proudly and safely helped to fuel quality of life in Wisconsin for more than 65 years.

It's important for you to know that safety and the environment are our number one priority.

## **Our pipelines are monitored 24/7, 365**

Safety is one of Enbridge's core values, it's at the very foundation of our business. That's why our pipelines are monitored around the clock using both people and computerized analysis. Our systems analyze pressure, temperature, and other important information from thousands of points all the way along our pipelines. All of our pipelines can be shut off remotely in a matter of minutes if a potential problem is detected.

## **Pipelines are safe, and built to last**

The Federal agency that regulates pipelines—the Pipeline Hazardous Materials Safety Administration—states that pipelines are the safest, most environmentally-friendly, most efficient and reliable way of transporting crude oil. Our pipelines are built using the highest quality materials and are inspected inch-by-inch on a regular schedule using specialized MRI-like technology, similar to the medical industry, which can detect even small changes in our pipelines over time.

## **Our pipeline operations are highly regulated**

As a company, we are responsible not only to the communities where we operate, but also to state and federal agencies and regulators. In fact, Enbridge announces projects publicly and follows a robust state and federal regulatory process.

## **There's more to our business than meets the eye**

As a company, Enbridge has invested nearly \$5 billion in alternative energy projects including wind, solar, geothermal and hydropower assets, and we will soon generate enough green energy to power more than one million homes. We are committed to doubling our renewable power generation capacity by 2019. We are currently ranked on the 2017 Global 100 list of the Most Sustainable Corporations in the world, based on our overall environmental and corporate governance performance, for the eighth straight year.

## **Helping to fuel Wisconsin**

Our pipeline network transports all of the oil refined in Wisconsin and most of the oil refined in the Midwest. That translates to 70% of the gasoline in vehicles on Wisconsin roads. We also employ 350 people right here in the state, working hard every day, maintaining our pipelines and doing everything they can to keep our lines safe for you, your neighbors and the environment.
