

Land Use and Protection

- Extensive environmental surveys and field studies were conducted to evaluate wetlands and waterbodies, threatened and endangered species habitat, and archaeological and cultural resources.
- Tribal cultural monitors will be present before, during and after construction.
- Environmental and cultural management practices during construction will minimize short-term disruption and long-term impacts to land.
- Construction, safety and environmental inspectors will be present during construction to monitor compliance with specifications and permits.
- Enbridge will develop and implement project-specific environmental protection plans, as required for regulatory approval.
