

Enbridge in Wisconsin: Superior Terminal

Superior Terminal is critical to the Enbridge liquids transportation system, as it serves as a hub for our Mainline pipelines coming in from Western Canada and western North Dakota. These lines provide 100% of Wisconsin's refinery supply, and deliver to connections that support 70% of Midwest refineries' needs.

Superior Terminal has been located in Douglas County, Wisconsin for nearly seven decades. This terminal was built in 1950 and following recent expansions includes 45 above-ground crude oil breakout storage tanks on 550 acres.

Superior Terminal serves as a control point and hub facility for crude oil products. We transport and temporarily store these products en route to their refining destination. This facility serves 10 pipelines – five inbound, four outbound and one line that passes through the Terminal moving diluent from Illinois to Edmonton, Alberta.

The workforce at Superior Terminal includes more than 50 full-time Enbridge employees. Jobs within the terminals include: Engineers; Technicians (Mechanical, Electrical, Operations, and Lab); Administrative Assistant; Manager and Supervisors.

Safe and reliable operations are the foundation of Enbridge's business. All Enbridge pipeline systems are monitored 24-hours per day. As the operators of vital energy infrastructure across North America, we know that the public has entrusted us with the responsibility to deliver the energy we all need and use, safely and reliably.
