Advancing Renewable Energy

ENBRIDGE

> Meet the Baaa-ranch managers. These sheep help keep vegetation in check at Sarnia Solar and have become such a hit that they're now lending a hoof at Flanagan and Orange Grove too.

Enbridge delivers the energy that fuels quality of life. Our workforce of 16,000 people safely connect millions of people around the world to the energy they rely on every day through our four core businesses—liquids pipelines, natural gas pipelines, gas utilities and storage, and renewable energy.

As a leading developer of renewable energy projects, Enbridge is strategically positioned with assets across five of the world's G7 countries.

We are a first-choice energy provider with a renewable energy portfolio of nearly 8 GW (gross). With over two decades of experience in renewables, we've invested about US$8 billion/C$12 billion in renewable energy projects across the U.S., Canada, and Europe.

We're actively pursuing renewable opportunities on both continents. To meet growing energy demand for our customers today and in the future.

Tomorrow is on.

Renewable energy

Onshore wind and solar

Enbridge recognized the potential of renewable energy early and has spent more than two decades building a leading North American wind and solar business. Today, we have an interest in 16 onshore wind and 18 solar projects in operation and under construction.

As demand for reliable, affordable power accelerates, we're partnering with leading technology companies and blue-chip customers, including Meta, AT&T and Toyota, to help power data centers, manufacturing facilities and growing communities.

Major developments such as Sequoia Solar (815 MW) and Cowboy Solar (365 MW), together with a 200 MW/1600 MWh battery energy storage system, are helping position Enbridge at the forefront of the next wave of energy growth.

Offshore wind

Enbridge's offshore wind journey is helping shape the next generation of clean energy in Europe. Since our first investment in Rampion off the coast of England, we've built a growing portfolio that now spans the U.K., Germany and France, including landmark projects such as Saint-Nazaire, France's first commercial-scale offshore wind farm, and Provence Grand Large, the country's first floating offshore wind project.

With major developments advancing in France and the U.K., our presence continues to expand across some of Europe's most promising offshore wind markets.

> The 300-MW Blackspring Ridge wind farm, located in Alberta, Canada, is one of the largest wind projects in the country.

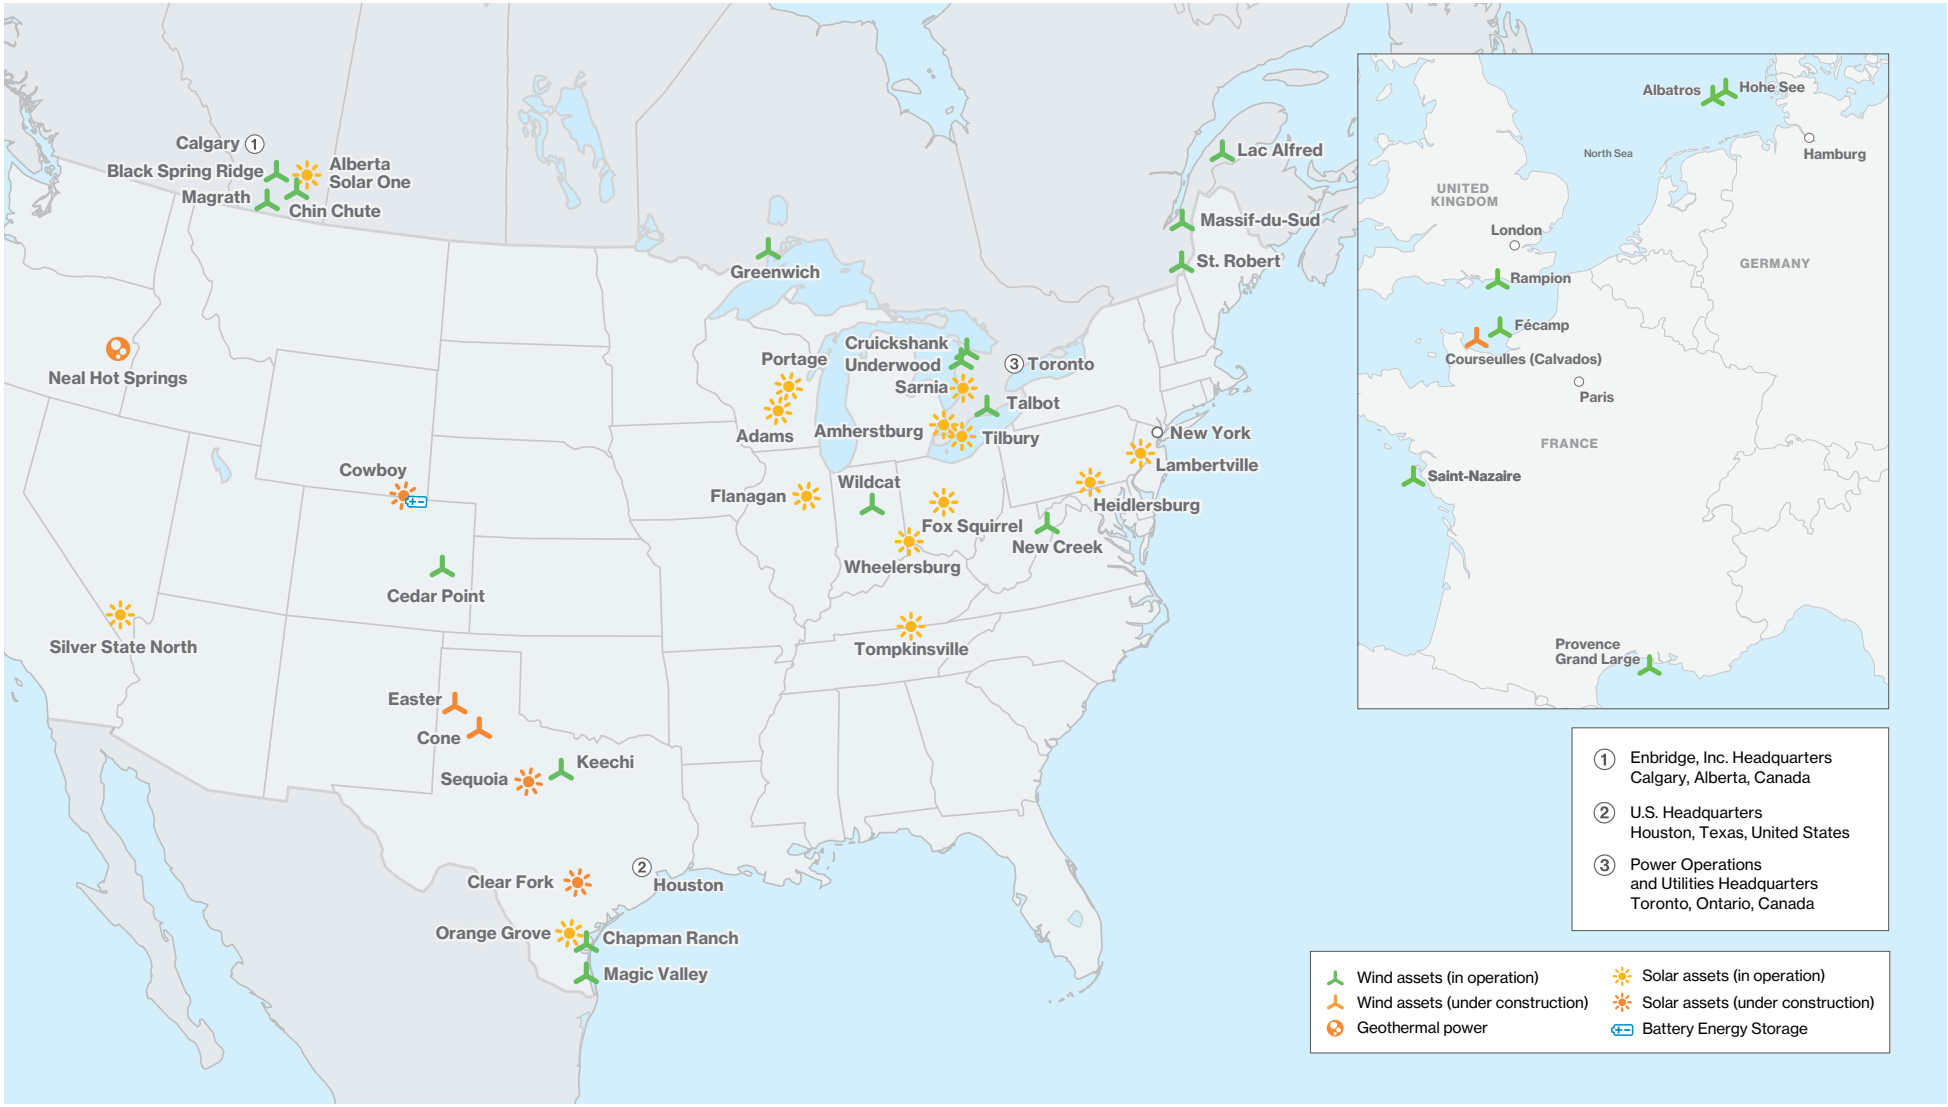

Renewable assets

Renewable energy project	Location	In-service date	Gross generation capacity (MW)	Net generation capacity (MW)	% ENB ownership
Offshore wind

Total power portfolio in operation and construction
(does not include development projects)

8,254 MW (Gross) **5,124 MW** (Net)

The big picture

> The 497-MW Hohe See offshore wind project, in the North Sea off the coast of Emden, Germany.

Enbridge has committed to the energy evolution by extending and modernizing our systems, growing our renewable power business, advancing clean energy projects like hydrogen and renewable natural gas, and investing in new technologies.

Liquids Pipelines

Enbridge operates the world's longest and most complex crude oil and liquids transportation system. We deliver more than three million barrels of crude and liquids every day, and we transport about 30% of the crude produced in North America.

Natural Gas Pipelines

Enbridge's natural gas pipelines connect North America's most prolific natural gas supply basins to the continent's largest demand centers, as well as liquefied natural gas (LNG) and Mexico export markets. Our network moves about 20% of all gas consumed in the U.S.

Gas Utility

Enbridge's natural gas utility is North America's largest natural gas utility by volume, serving 7 million residential, commercial and industrial customers in Ontario, Québec, Idaho, North Carolina, Ohio, Utah and Wyoming.

Power

Our renewable energy projects include wind, solar, and geothermal facilities located throughout North America and Europe. This portfolio of over 8 GW renewable energy projects (gross), whether operating or under construction.
