

Gator Express Meter Project

Texas Eastern Transmission, LP (“Texas Eastern”), is a leading provider of natural gas transportation and storage services to many of the largest natural gas markets in the United States. The Gator Express Meter Project efficiently expands Texas Eastern’s existing infrastructure and transportation capacity to serve Venture Global’s proposed Plaquemines LNG export facility located in Plaquemines Parish, Louisiana.

Project overview

The Gator Express Meter Project entails construction of new metering and regulating facilities (M&R facilities) with a delivery capacity of 240,000 dekatherms per day to be installed on a platform owned by Gator Express, as well as a new hot tap, interconnecting piping and related facilities extending from Texas Eastern’s Line 40 to the M&R facilities. The project is anticipated to be placed in-service in July 2023, and is designed to minimize disturbances to landowners, communities, and the environment.

Project benefits

The Gator Express Meter Project connects North American supply to growing gulf coast markets and improves and diversifies the energy supply.
