What we do

To appreciate the impact that energy has on our quality of life, it’s important to understand the journey taken by various energy sources as they make their way to consumers.

Transmission Pipelines

Enbridge is North America’s leading energy infrastructure company. We move about 30% of the crude oil produced in North America, and about 20% of the natural gas consumed in the U.S. through our vast transmission pipeline networks.

Energy Storage

Enbridge has a significant North American presence in contract storage across North America—about 45.6 million barrels of crude oil contract storage capacity, and about 438 Bcf of net working storage for natural gas.

Natural Gas Utility

Enbridge Gas Inc. (EGI) is North America’s largest natural gas utility by volume, and third largest by customer count. With 3.9 million residential, commercial, institutional and industrial customers, EGI has been delivering energy for 170 years.

Renewable Power Generation

Our operating renewable energy assets have the capacity to generate 5,192 megawatts (MW) gross, or 2,175 MW net, of zero-emission energy—enough to meet the electricity needs of about 967,000 homes, based on net generation figures.
