COMMODITY CLASSIFICATION

Commodities shall be classified on the basis of the density and viscosity in effect at the time of receipt by the Carrier and assessed a charge including the appropriate surcharge listed below. Density shall be based on 15°C. Viscosity shall be based on the Carrier's reference line temperature at the time of receipt. Where the density of a commodity falls within the density range of one commodity classification and the viscosity of the commodity falls within the viscosity range of another commodity classification, then the commodity shall be deemed to be in the commodity classification with the higher surcharge. Tolls shall be calculated as a percentage of the light petroleum transmission charge.

LIGHT PETROLEUM – A commodity having a density from 800 kg/m³ up to but not including 876 kg/m³ and a viscosity from 2 mm²/s up to but not including 20 mm²/s will be classified as **Light Petroleum**.

MEDIUM PETROLEUM – A commodity having a density from 876 kg/m³ up to but not including 904 kg/m³ and a viscosity from 20 mm²/s up to but not including 100 mm²/s will be classified as **Medium Petroleum**.

HEAVY PETROLEUM – A commodity having a density from 904 kg/m³ to 940 kg/m³ inclusive and a viscosity from 100 mm²/s up to and including 350 mm²/s will be classified as **Heavy Crude Petroleum**.

TRANSMISSION SURCHARGES

ABANDONMENT SURCHARGE: The transportation tolls include Abandonment Surcharges pursuant to National Energy Board Decision MH-001-2013 and Order MO-030-2014 for movements of all commodities.

RR SURCHARGE: The transportation tolls for all deliveries to Montreal include a surcharge of **[D] \$1.5689** ~~\$1.7548~~ per cubic metre, regardless of distance and commodity type.
